

## Welcome to Server Making Assets Pack

Server Making Assets Pack allows server makers to create the most beautiful server imaginable by providing a huge collection of assets — including logos, role icons, headers, logo templates, and more.

You may use assets within for the benefit of improving your server. Please refer to [Terms of Use.pdf](#) for more information regarding how this resource can and cannot not be used.

Templates are designed to be edited in Photoshop, and as such require that you to be able to open and edit [.PSD](#) files. Applications and websites other than Photoshop may be used but are only recommended if you do not have access to Photoshop. However, beware that templates have not been tested in other applications or websites and as such may not work correctly. Should you not be able to edit these templates, there are premade options that you may find useful.

## Thank you for downloading!

A handwritten signature in white ink, appearing to read 'Aeno', written in a cursive, flowing style.

Aeno, product developer
